

I read the comments from James A Steneger, in document 6514284566. Some of the statements in Mr Stenegers document are totally without merit.

In section 4, "Access BPL Systems are class A, not class B devices" I suggest you strike this section from the record, as the supporting evidence is totally irrelevant. Is the commission prepared to reclassifiy all class B devices as class A devices?

In section 5, "Changes to emission limits", the presenter makes no demonstrative reason to change the emission limits. His reasoning is totally without merit. Is the commission prepared to recind the emission limits for all devices?

For these reasons, I respectfully submit you discount the entire 6514284566 document. The submitter did not present any meanfull dialog.
